

Manuscript Title: A Two-Stage Fitting Method for Truncated Stem Diameter Distributions

Author: Gregory E. Paradis

Department of Forest Resources Management, University of British Columbia, Vancouver, Canada

Corresponding Author: Gregory E. Paradis

Email: gregory.paradis@ubc.ca

ORCID: 0000-0001-9618-8797

Keywords: truncated distributions; fixed-area plots; diameter modelling; nonlinear optimisation; reproducible research

Statements and Declarations:

Funding: Development of this work was supported by the Forest Resources Environmental Services Hub (FRESH) at the University of British Columbia. Funding was provided by the Natural Sciences and Engineering Research Council of Canada (NSERC, grant RGPIN-2023-04197).

Competing Interests: The author declares no competing interests.

Author Contributions: G.E. Paradis designed the study, performed the analysis, and prepared the manuscript.

Employment: G.E. Paradis is employed as an Assistant Professor at the University of British Columbia.

LLM Use: LLM-assisted editing improved readability; the author approved all content.

Data Availability: Scripts, processed datasets, and the companion notebook are available at <https://github.com/UBC-FRESH/dbhdistfit-papers>; raw PSP tallies originate from Données Québec and are accessible via its public portal.

Consent/Ethics: Not applicable; the study uses publicly available data.

Word Counts

Total number of words (including references): 2 357

Total number of words (excluding references): 1 998

Abstract number of words: 150

Number of words in Supplementary Information: 0

Submission Type: Brief Communication
